Robe Show Lighting launches new Cyber Control software

Cyber Control is a new DMX lighting software launched by Czech Republic moving light manufacturer Robe Show Lighting.

Cyber Control is a new DMX lighting software launched by Czech Republic moving light manufacturer Robe Show Lighting. Cyber Control is designed for users preferring to use a computer rather than a conventional lighting console for show and exhibition build-up/programming periods.

It is extremely quick, easy and logical to learn, and creates a perfect visualization of all types of lighting fixtures (including conventionals like PARS, ACLs, Profiles, Molefeys, etc) and all parameters of intelligent lights. The end result is a sophisticated 3D visualization of the show, including realtime beam, gobo and iris simulations. The PC-based software includes a large fixture library of the most popular and commonly found moving lights.

Cyber Control comes in three versions: Cyber Cue, Cyber Pro and Visual Control.

CyberCue and CyberPro enable a show to be created on computer and run directly from a PC using a USB interface - a hardware tool supplied with the software. Once the show is completed, the data can be uploaded into the USB Interface, the PC can be disconnected, and the show actually run from the Interface - thanks to 'Stand Alone' mode.

CyberPro contains the multimedia extension EASY SHOW, allowing users to add multimedia music and image files (e.g. WAV, MP3, CD, AVI, MPEG, etc) into their onscreen show. Harnessing the power and potential of the 3D visualiser, the simulations will play-back with these multimedia files when using CyberPro.

A special version of the software - **Visual Control** - enables the "downloading" of show data from a lighting desk to a computer for offline editing.
